

**SYSTEM, METHOD AND APPARATUS FOR MAINTAINING CELLULAR
TELEPHONE NETWORK SITE INFORMATION**

5

Abstract of the Disclosure

A system, method and apparatus for maintaining cellular telephone network site information is disclosed. A distributed database management system may provide a user with several items of real-time information regarding a cellular telephone network site such as: cell name, cell number, location code, address, latitude/longitude, switch number, battery information (e.g., type, manufacturer, model) for all strings, building information (e.g., building and tower type, gate codes, generator information), contact information (e.g., fire, police, landlord etc.), directions to the site, facility circuit identification numbers and log entries for audits of changed data. In one embodiment, the user can be provided with emergency data associated with the telecommunication network. A common database is provided for storing the information from various entities within an organization responsible for maintaining the cellular telephone network site. Once the information is stored in a common database, it can be made available to users associated with the various entities as well as to various other computer software programs residing on the distributed system.
